# ANNUAL REPORT

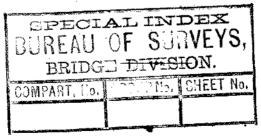

OF THE

# CHIEF ENGINEER - SURVEYOR

OF THE

# CITY OF PHILADELPHIA,

FOR THE YEAR 1886.

PHILADELPHIA:

DUNLAP & CLARKE, PRINTERS AND BINDERS, 819 & 821 FILBERT ST. 1.887.

## DEPARTMENT OF SURVEYS.

### OFFICERS, 1886.

Chief Engineer and Surveyor. SAMUEL L. SMEDLEY.

Principal Assistant Engineer, J. MILTON TITLOW.

Assistant Engineer, J. KAY LITTLE.

ŝ

Recording Clerk. EDWARD H. THOMPSON.

Sewer Register, WILLIAM CALVERT. Sewer Clerk, WM. T. MCPHAIL.

Draftsmen.

Carl A. Trik, George S. Connor, George E. Datesman, Stenographer and Type-writer, Joseph R. Scott. Rodman, Hugh Trik. Messenger, Isaac Holland.

### REGISTRY BUREAU.

Registrar, JOHN H. DYE.

Search Clerk, James W. Simmons. Registry Clerk, Richard B. Davis. Draftsmen,

Jonathan Eggleton, Henry C. Glenn, William H. Wester, Francis Lightfoot. S. Crawford Smith.

George H. Mercer Henry C. Hamer,

Inspectors of Sewer Connections,

J. Seilers Kite.

George F. Uber.

Inspectors of Sewer Construction. Henry M. Smith. William Wilson, Charles Y. Lauderbach, Benjamin E. Hooven, William Yetter, Abraham Ruth. George L. Deitz, James McGill. William May, John Abel, Jr.,

S. R. Franklin, James Duffy. George Moore, Newton B. Beam, C. P. McCally, C. R. Van Horn, Findley J. Watt, Joel P. Colebaugh, Theo. A. Brackney, Wm. Penn Brown, Salathiel Cox.

David J. Davis, Joseph Hunter, Theodore D. Hooper, Michael McGrath, George McLean, John McCormick. John G. Moore, David S. Rorer. Edward Y. Shelmire, Emerick H. Sickels.

### ANNUAL REPORT

OF THE

### CHIEF ENGINEER AND SURVEYOR,

FOR THE YEAR 1886.

Philadelphia, January, 1887.

Hon. William B. Smith, Mayor of Philadelphia.

DEAR SIR—I herewith submit a statement of the general condition and business of this Department, together with the amount of appropriations, receipts and expenditures for the year ending December 31st, 1886:

The appropriation under Ordinance of December 30th, 1885,		
was	\$355,918	00
To which was added, from the appropriation of 1885, which	. ,	
did not merge	81,795	67
Appropriation of March 16th, 1886	17,700	00
Appropriation of April 6th, 1886	2,500	00
Appropriation of May 18th, 1886	523,000	06
Making a total of appropriation for and during 1886	\$980,913	67
Expended during the year\$391,495 31		
Carried to the credit of contracts 559,030 39		
Balance which merged at the close of the year 30,387 97		
<del></del>	980,913	67

The receipts from all sources amounted to \$22,481.40, an increase over last year of \$7,852.46; received for permits, \$12,409; for certificates and searches in Registry Bureau, \$2,412.75; for sewer bills and balances of accounts, \$7,600:15; copies of plans, appeal fees, etc., \$59.50. Total, \$22,481.40.

### Registry Bureau.

The work of the Registry Bureau has shown considerable gain. In addition to keeping up the work already plotted, nearly all the Twenty-second Ward, including the rural portions has been plotted. There were 2,924 more lots plotted than in 1885.

Total lots plotted, December 31, 1885	204,413 9,778
Total to December 31, 1886	214,191
Transfers entered December 31, 1885	253,588 21,992
Total to December 31, 1886	275,580
Total entries for the year 1886,	31,770 407,996 22,965
Total to December 31, 1886	430.961

Searches have been made out for 9,651 properties, 1,703 more than last year, for which \$2,428.25 was received, an increase of \$437.75.

### City Plans and Surveys.

The work done on the City Plot during the last year has been confined exclusively to revisions of old plans, made necessary by a change of local conditions, the construction of lines of steam railroads, and by a more practical and intelligent study of the localities from the topographical surveys that have been made. During the year 1886, the revision of fourteen (14) sectional plans have been filled; from the care that has been exercised in their preparation, the City will save, in the grading of streets, many thousands of dollars, over and above the cost of the plans; and the owners of the real estate will be correspondingly benefited.

The topographical surveys have been extended as far as the limited appropriations would permit; covering, for the

year 1886, 2,624 acres; making a total area covered to date of 28,575 acres.

Under ordinances of Councils plans have been prepared for the revision of the lines and grades of twenty-two (22) individual streets, and for placing on the City Plans thirtyfour (34) new intermediate streets in various portions of the City.

### Bridges.

The contract for rebuilding the western approach of South street bridge with stone piers on the old foundations, and with iron-plate girder-spans, with granite block roadway and granolithic sidewalks having been cancelled, a new contract was made with H. G. Clement for its completion. The final payments were made during this year, although the work was finished December 12, 1885. Both contracts resulted in a total cost to the City of \$79,820, the original contract price having been \$81,920, the difference of \$2,100 was deducted as damages for delay in completing the contract.

### Spencer Street Bridge.

Spencer street bridge over the Norristown Railroad, near the Falls of Schuylkill, consists of stone abutments of rubble masonry, with two wrought-iron plate-girders, each seventy (70) feet long. The clear span is sixty-six (66) feet. The floor is 3-inch yellow pine, on seven (7) lines of 4" x 6" yellow pine floor joists, with 4" x 4" guard-rails. The contract price is \$2,300; payments this year, \$1,656.

### Ontario Street Bridge,

Over the Norristown Railroad, has a clear span of sixty-six (66) feet six (6) inches. The abutments, including coping and bridge-seats, have been completed, and only one estimate of \$761 was paid at the close of the year.

### Fifty-second Street Bridge,

Over Mill creek, near Wyalusing avenue, is partially done; for work on the abutments \$640 have been paid.

### Abutment, Poplar Street.

The east abutment of a bridge over Pennsylvania avenue, at Poplar street has been finished. This is substantial rangework of Hummelstown brown-stone, for which the final estimate of \$3,470 was paid on June 7, 1886.

# Market Street Bridge. The contract for the iron bridge over the Schuylkill river

at Market street, with R. A. Malone & Sons, of Lancaster, Pennsylvania, was executed on the twenty-fourth day of June, 1886; the amount to be paid for the piers, abutments and iron superstructure, complete, is \$271,000. Delays occurred in consequence of the veto of the ordinance approving the contract which became a law on the sixth of September; and on the seventh of September, the contractor was notified to commence work.

At the close of the year the old piers have been taken down to low-water mark, and also portions of the abutments. The latter have been rebuilt to the full height required, and the foundations of the shore piers are completed. The amount paid on account of work done is \$18,297.92. For engineering and inspecting, \$4,090.37.

The bridge consists of three spans across the river, the centre

being 214.6 feet, and 97.6 feet on each side. The west shore plate-girder span across the Delaware extension of the Pennsylvania Railroad is 63.74 feet, and the span over the Schuylkill River East Side Railroad is 64.65 feet; a total of 550 feet. The bridge is designed as a deck-bridge, on the cantilever principle, and will have an asphaltum roadway of 52 feet wide and sidewalks 12½ feet each, to be paved with granolithic stone. The centre of the bridge will be 6.8 feet higher than the centre of the old bridge; the bottom chord of the centre span will be 23 feet above ordinary high-water. The heavy grade of the street on the east side of the river is continued on the shore span. The raising of Market street so as to dispense with the heavy grades west of the river has proved so benefi-

cial to the public, that there is a strong desire for raising it similarly on the east side, in which case one end of the plate-girder shore-span can be raised without detriment to the structure. Provision has been made for the conduits of the Cable Railroad and for water, gas, and electrical pipes.

The Schuylkill River East Side Railroad has been completed along the river, including the tunnel under Twenty-fifth street, from Callowhill street to Pennsylvania avenue, and along Pennsylvania avenue to Taney street, so that a perfect and safe connection between the Reading Railroad and the Philadelphia and Baltimore Ralroad has been made, and the entrance to Fairmount Park and communication across the river at this point secured without the smoke, danger and detention of passing trains, the underground railroad being entirely out of view. A similar tunnel has also been built at Gray's ferry road, and the railroad passes under all the river bridges in its course along the wharves, which have been built continuously according to the Port Wardens' lines established by this Department.

The road was opened to travel between Philadelphia and Baltimore on the nineteenth day of September.

### Intercepting Sewer.

Work on the intercepting sewer was continued during the year, and 11,786 feet, or 2.23 miles, comprising Sections No. 9, 10 and 11 were built.

Section 9 extends from Station 590 to Station 641, a total length of 5,100 feet; its point of commencement is about 200 feet north of Reading Railroad bridge. It continues along the northeast side of the river drive to a point above Rodman street, where it diverges slightly to the right, passing through the Park meadow between the river and Ridge avenue, crossing Ridge avenue and ending in the middle of the Wissahickon drive.

The brickwork is completed except where Dobson's run crosses the sewer.

The plastering of the invert has progressed very slowly, and a considerable portion vet remains to be done.

The refilling over the sewer is incomplete.

A terra-cotta pipe has been laid at various places along the line to accommodate the adjacent properties. Price per foot, \$8.40. Payments, \$28,032. Work commenced, June 5th, 1886.

SECTION 10 extends from Wissahickon drive, crossing Wissahickon creek through the new dam, and continuing along the Ridge road to the Main street, and along the same to Cedar street, Manayunk, where it turns to the left, crossing Ridge avenue, and connecting with the iron pipe sewer, Section 11, length, 5,019, 137.3, including connection at Wissahickon creek. Price per foot, \$13.49. Total price for dam and connections, \$13,400. Payments, \$60,160.

Section 11 extends from near Main street to Harding's paper mill. Its point of commencement is in the race, near Main street, from which place it extends diagonally across the Schuylkill canal to the southwest side, thence continuing along the same to Harding's paper mill. Length, 1,667 feet. Size, 42" iron pipe. Price per foot, \$13. Payments, \$23,396.21.

SECTION 6. This section was completed last year, except the plastering of the invert, which was finished in the spring.

The final estimate was paid March 22; a deduction to cover damages for delay was made as follows: Thirty-six days at \$5, \$180.

Sections 7 and 8. The final payment on these sections was made January 8th.

\$4,325.52 was retained from the contractors, in accordance with a resolution of Select and Common Councils dated January 7th, 1886.

Section 12 of Manayunk sewer extends along the canal, from Harding's paper mill to Main street bridge. Work was commenced December 23d, and up to the end of the year nothing was done except excavation.

Storm-water Conduit in connection with Intercepting Sewer.

The storm-water conduit, diameter  $8\frac{1}{2}$  feet, along the north side of the Reading Railroad, Falls village, from the Schuylkill river north-eastward, has been completed to a point above Ridge avenue, a distance of 1,000 feet, including the outlet at the river and the chamber to connect the Ferry road sewer. Payments to date, \$18,520.

### Ferry Road Sewer,

From the storm-water sewer at Falls bridge to Ridge avenue, 150 feet of circular sewer, 3' 3" in diameter, and 120 feet of circular sewer, 2 feet in diameter has been built. Payments, \$1,152.

### Mifflin Street Sewer,

From Schuylkill river northeastward, crossing Ridge avenue, 280 feet of circular sewer, 6 feet and 5½ feet diameter, has been completed, including outlet; also 185 feet of 18" tera-cotta pipe. Payments, \$3,456.

### Flushing-Chamber and Connections at Wissahickon Creek.

425 feet of sewer, 4'7" diameter; arched but not plastered; foundation for flushing-chamber partly excavated; material on ground. Payments, \$4,032.

### Wissahickon Valley Sewer.

1,200 feet of this sewer has been arched and partly covered. Payments, \$4,000.

Section 11 of the intercepting sewer, 1,666 feet long, was constructed during the most severe freezing weather, because it had to be built under the bottom of the canal and along the towing-path of the Schuylkill Navigation Company, while it was closed to navigation between Christmas and the fifteenth day of March. Although attended with great difficulty the work was successfully completed.

Of Section 10, 840 feet on Ridge avenue were built in tunnel, and a very substantial new stone dam was built across the Wissahickon creek, through which the sewer has been carried.

Excepting about 50 feet at Dobson's run, the brick and iron conduits are all laid for this important work, from Fairmount to Levering street, a distance of 31,000 feet, or nearly six miles. A branch for flushing the sewer from Wissahickon creek is nearly completed, and the sewer extension has been contracted for for 3,000 feet along the Wissahickon, to intercept the sewage from the west slope of Germantown.

4,300 feet of sewer are yet required to complete the intercepting sewer from Fairmount to Flat Rock paper mills, 2,300 feet of which are now under contract.

### Main Sewers.

Dauphin street, from Twenty-fourth street to Sedgley avenue. This work was continued and completed and final estimate paid on April 20th. Number of feet built in 1885, 100; in 1886, 255; total, 355.

Sixteenth street sewer, from Snyder avenue to near Mifflin street. The final estimate was paid on February 9th, 1886.

Twenty-fourth street, from Dauphin street to York street. This work continued and completed. Final estimate paid April 20th. Number of feet built in 1885, 300; in 1.86, 297; total, 597.

Mill creek sewer, on Sansom and Meadow streets. Work continued and completed. Final estimate not yet paid. Number feet built in 1885, 160; in 1886, 231; total, 391.

Annsbury street, across Fifth street. Work completed, and final estimate paid April 20th, 1886.

Sixteenth street sewer, from near Mifflin street to Wharton street. Work was commenced July 21st, and completed November 8th. Concrete invert blocks were used in this sewer. Length, 2,528 feet. Cost, \$13,599.97.

Mill creek sewer, on Forty-seventh street and Brown street. This sewer extends on Forty-seventh street, from the old sewer north of Aspen to Brown street, and on Brown street to Fortyeighth street, where it connects with the sewer built some
years ago to carry Forty-eighth street over Mill creek. This
sewer is circular, 15 feet in diameter, except where it curves
from Forty-seventh street into Brown street, with a radius of
150 feet. On this curve the size of the sewer is increased to
156 feet high by 16 feet wide. Two ventilators and one wellhole have been built in connection with the sewer.

The old branch sewer on Brown street, east of Forty-seventh street, was extended to Forty-seventh street, and thence eastward to connect with the well-hole in the new sewer; the outlet of this sewer has long been a nuisance, as its contents were discharged into a shallow stream. This has been remedied by the connection above referred to.

The bottom of sewer under Forty-eighth street was raised and shaped to conform to the new sewer. Length of sewer, 470.07 feet. Length of new bottom in old sewer, 124 feet. Price per foot, \$35.74. Price per foot, bottom, \$12. Total cost, \$18,288.30, of which \$1,178.72 was paid in assessment bills.

### Branch Sewers.

92,317.71 feet of egg-shaped sewers of brick, various sizes, and 4.539.67 feet of terra-cotta pipe sewers (a detailed account of which is given elsewhere) were built. A number of sewers were partially completed at the end of the year, having a length of 12,094.54 feet.

### Manholes.

638 manholes were constructed, an average of one manhole for every 150 feet of sewer.

### In lets.

243 inlets were built in connection with the branch sewers of the following sizes: Two of No. 1, average cost each, \$95; 109 of No. 2, average cost each, \$86.29; 132 of No. 3,

average cost each, \$80.28. One inlet was put in for every 398 feet of sewer built.

### Inspection.

The cost of inspection for each lineal foot of branch sewers, including manholes, inlets, and well-holes, was 14 cents.

### Inlets built in connection with old Sewers.

Two contracts were awarded for building brick and stone inlets, manholes and well-holes, during the year. The amount to be expended under the first contract was \$7,000; under the second contract, \$2,000.

The sizes, number built and cost (under first contract) was as follows: 5 No. 1, brick and stone, at \$96.25, \$481.25; 29 No. 2, brick and stone, at \$87.45, \$2,536.05; 45 No. 3, brick and stone, at \$81.15, \$3,651.75; 1 well-hole, 29 feet, at \$5, \$145; 2 manholes, at \$25, \$50; 127 feet of terra-cotta pipe, at \$1.09, \$138.43; total, \$7,002.48. In excess of contract, \$2.48.

Under the second contract, as follows: 1 No. 1, brick and stone inlet, at \$106.75, \$106,75; 8 No. 2, brick and stone inlets, at \$97.25, \$778; 10 No. 3, brick and stone inlets, at \$88.50, \$885; 22 feet of terra-cotta pipe, at \$1.15, \$255.30; total, \$2,025.05. In excess of contract, \$25.05.

The sizes and number of iron inlets built were as follows: 12 No. 2, iron inlets, at \$105.50, \$1,266; 1 No. 3, iron inlet, at \$91, \$91; 1 No. 3 Shedakar trap, at \$65, \$65;  $76\frac{1}{2}$  feet terra-cotta pipe, at 75 cents, \$57.30; total, \$1,479.37.

The brick and stone inlets were inspected at a cost of \$686.66, or \$7.38 for each inlet, and iron inlets at a cost of \$100, or \$7.10 per inlet.

### Sewers built at Private Expense.

59 feet of egg-shaped and circular sewers of brick, and 10,529 feet of terra-cotta pipe sewers were laid at private cost during the year. They were inspected in the same manner

as the public sewers. Slants for house connections were inserted, and manholes built when necessary.

### Office Work.

Office work consisted in preparing advertisements, schedules for use of bidders, hotifying contractors to begin work, preparing contracts, making estimates, examining sewer assessment bills, signing and stamping them, indexing and arranging the accumulated papers, etc.

194 excess bills (to be collected by the city) are accounted for as follows: 146 served and paid, amounting to \$4,689.36; 33 served and sent to Law Department for lien, \$1,731.67; 14 served and unpaid, \$747.04; 1 not served, \$127.83; total, \$7.295.90.

The amount of money returned to the city where the amount of assessment bills exceeded the cost of the sewers, was as follows: In 194 assessment bills, \$7,295.90; in cash paid by contractors (to balance), \$620.39; total, \$7,916.29.

### Inspection and Records.

An inspector is placed on each sewer when the brick work is commenced, and is required to be on the work at all times while it is in progress, and upon completion certify under oath that everything connected with the work has been properly done in accordance with the contract and specifications before the final estimate is delivered to the contractor. Daily reports of the condition and progress of the work and character of excavations is made to me, and the Assistant Engineer, John K. Little, gives constant supervision to the inspectors and outdoor construction.

Slants are put in opposite each lot and a record thereof made. The lines and levels for the sewers are furnished by the District Surveyors, in accordance with the official plans. The Surveyors also make out all the assessment bills and the final plans, which are placed on file in the Department and entered on the drainage maps. 175 of these plans of main and

branch sewers have been received and entered in the sewer reference books. 215 of the Inspectors' diaries and record books of progress have been filed and indexed; all of which are in frequent use. The entry of the location of each slant on large plans is greatly needed, but cannot be done with the present force.

The returns of drains and sewers built in the streets at private expense under the inspection of the Department number 46.

The gutter complaints received were 38, of which 11 were satisfactorily drained, 5 were dismissed as not subject to the provisions of the ordinance, and 22 are now pending.

The inspectors of sewer connections have been continuously ou duty during the year. The result of their labors is shown by the following statement:

Inspected.	Not Inspected.		$Unaccounted\ for.$
By plumber inspectors, 1,953	South of Lehigh ave.,	31	7
By brickl'r inspectors, 96	North of Lehigh ave.,	63	0
<u></u>		-	<del></del>
2,049		94	7

An examination of the table shows the want of an additional inspector for the northern part of the city.

In addition to former duties, the making of daily reports to the Board of Health, of all applications for connections with sewers has become necessary; these are of much value to the inspectors of plumbing; they increase the efficiency of the supervision authorized by the Act of Assembly.

In compliance with a resolution of the Board of Health to that effect, the granting of permits to others than registered plumbers has ceased; the names of all those registered being furnished by the Health office.

On the thirtieth day of October, George Sturges, the Recording Clerk, who had held that position since the organization of the Department in May, 1855, died suddenly from paralysis, and Edward H. Thompson was promoted to the po-

sition; William Calvert was appointed his successor as Sewer Register, and William T. McPhail was appointed Sewer Clerk. J. Milton Titlow continues in the position of Principal Assistant Engineer, and John H. Dyé as Registrar. In addition to the regular force of the office, a corps under the charge of George H. Paddock, Assistant Engineer, has been engaged in giving the lines and grades for the intercepting sewer and on stormwater sewer and connections; also for the Wissahichon valley sewer. Besides general superintendence of the work of the work of construction, they have extended the surveys from Harding's mill to Flatrock dam, including the location of the mills, canal, sluiceways, soundings, etc. Assistant Engineer Fred. J. Amweg, with a leveller and a rodman, has been especially employed on the construction of Market street bridge since September 8th.

With the work of the Department well systematized, the employees of the office have taken deep interest in the performance of their duties, and the universal perseverance and industry manifested has resulted in accomplishing an extraordinary amount of work, and the accumulation of large additions to the valuable records of the office, which entitles them to especial commendation.

The usual tables of details relative to work and expenses are herewith submitted.

Very respectfully,

SAMUEL L. SMEDLEY,

Chief Engineer and Surveyor.
