

EVALUATING THE USE OF FAIRMOUNT DAM FISH PASSAGE FACILITY WITH APPLICATION TO ANADROMOUS FISH RESTORATION IN THE SCHUYLKILL RIVER, PENNSYLVANIA

Lance H. Butler

Office of Watersheds, Philadelphia Water Department

Joseph A. Perillo

Bureau Of Laboratory Services, Philadelphia Water Department

Schuylkill Watershed: A Geographic Perspective

Schuylkill County

- Drains approximately 2000 square miles and travels about 130 miles
- Encompasses 11 counties

Philadelphia County

Schuylkill Watershed: *A Historical Perspective*

- Known as “Hidden Creek”
- Provided much of our country’s colonial and revolutionary history
- Supported a large commerce
 - Farming
 - Timber
 - Coal
 - **Fisheries**

Historical Perspective

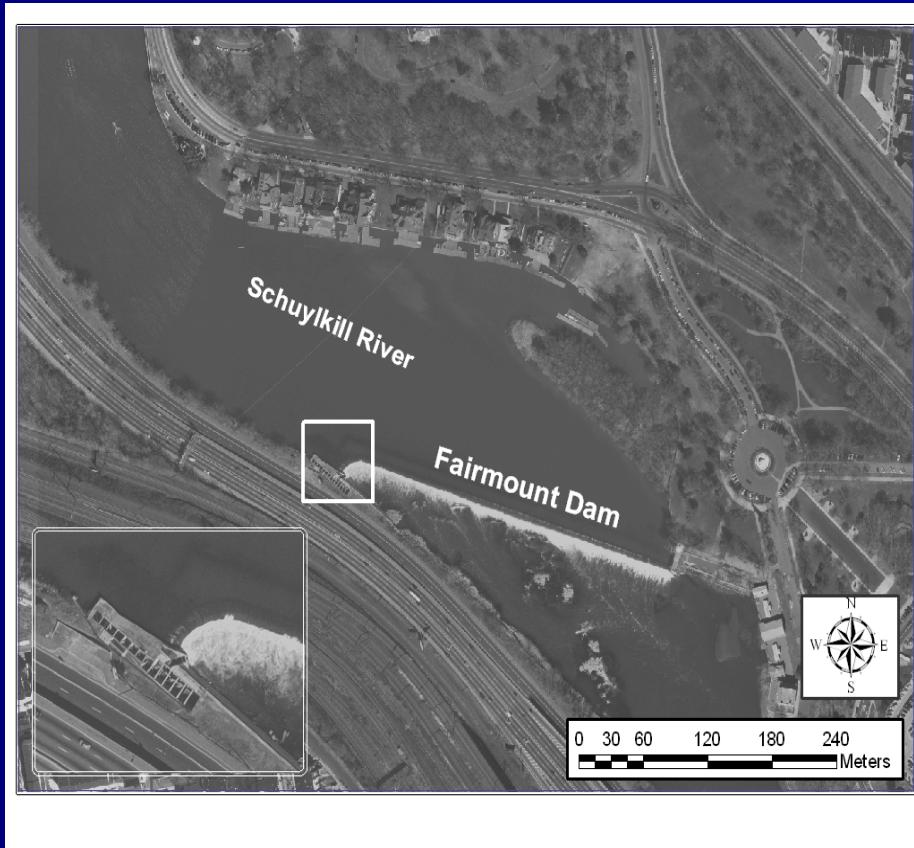

■ Fairmount Dam

- Created in 1820 as a source for drinking water
- Diverted water to power pumping station for distribution
- Eliminated runs of anadromous fish species and other semi-migratory species in the Schuylkill Drainage
- Prevented upstream dispersal (i.e., genetic transference) of resident fish species

Fairmount Fish Ladder

- Completed In 1979
- Vertical slot fish passage facility
- Heavily used by resident fish species
- By 1984, restoration and monitoring activities of migratory species were diverted to other drainages.

Fairmount Fish Ladder

- Completed In 1979

- Heavily used by resident fish species
- By 1984, restoration and monitoring activities of migratory species were diverted to other drainages.

Construction Of Fairmount Fish Ladder, 1978

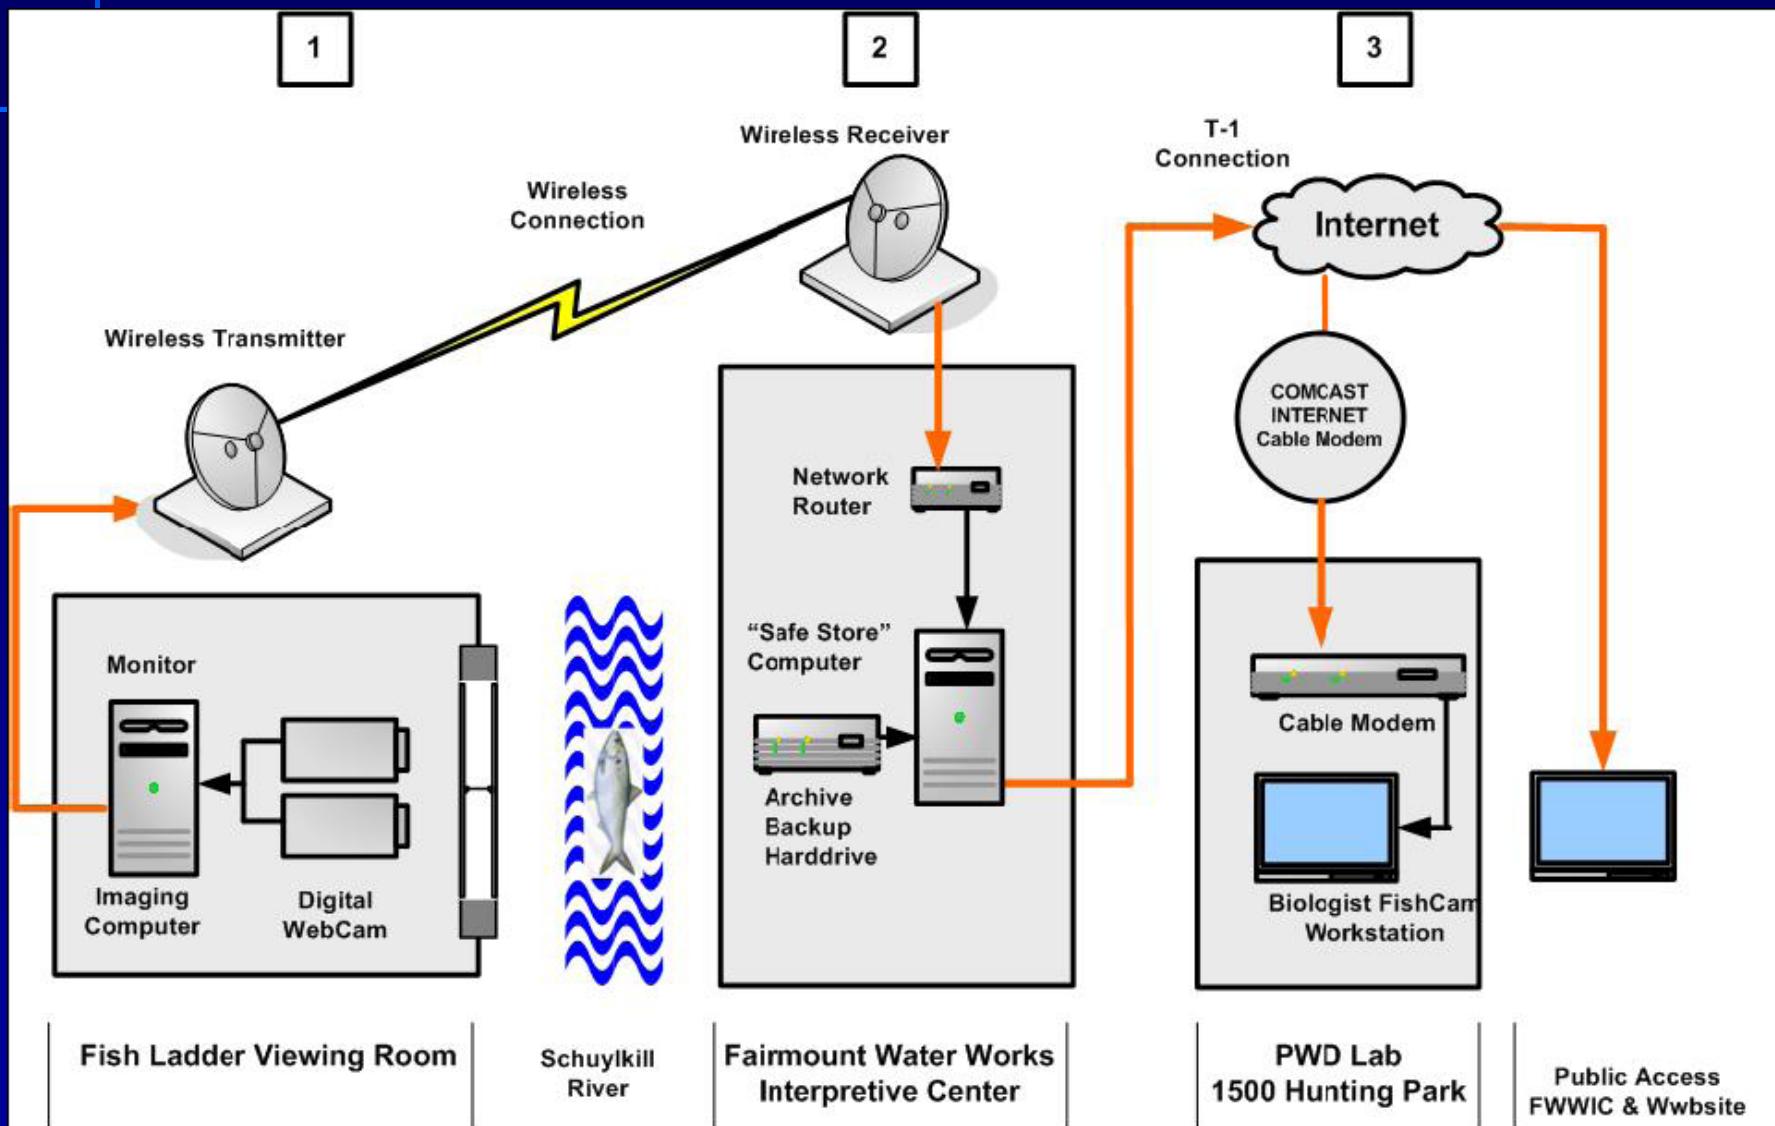

Philadelphia Water Department's Involvement:

- In 2002, PWD took over the responsibility for O&M of the Fairmount Fish Ladder
 - Developed a sophisticated video monitoring system
 - Implemented a standard fish monitoring program
 - Created a public outreach and education website
 - Entered an agreement with USACE to restore and optimize fish passage facility

Fish Sampling Locations

- Four Sampling Stations
- Low Tide Sampling
- Uniform Level Of Effort
- Consistent Electrical Output
- Minimal “Handling”

Fish Surveys

Weight Measurements

Fish Surveys

Species Identification, Sex & Length Measurements

Fish Surveys

DELTA Observations

Preliminary Results: *Pre-Restoration (2002-2008)*

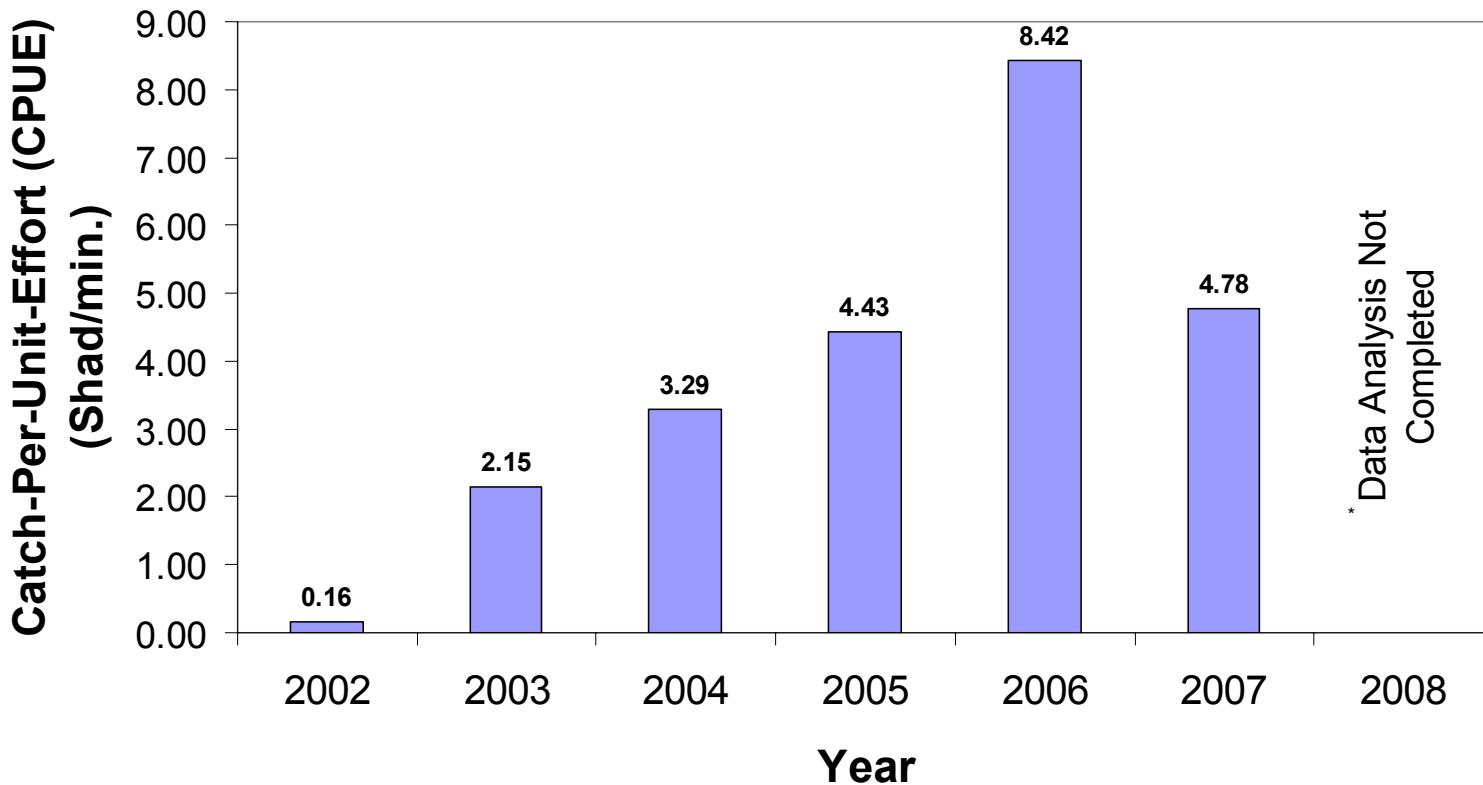

■ Overview

- 34 species of fish surveyed below the fish ladder between 2002-2008.
- 27 species observed passing through the fish ladder.
- 5 anadromous species observed using the Fairmount Fish Ladder

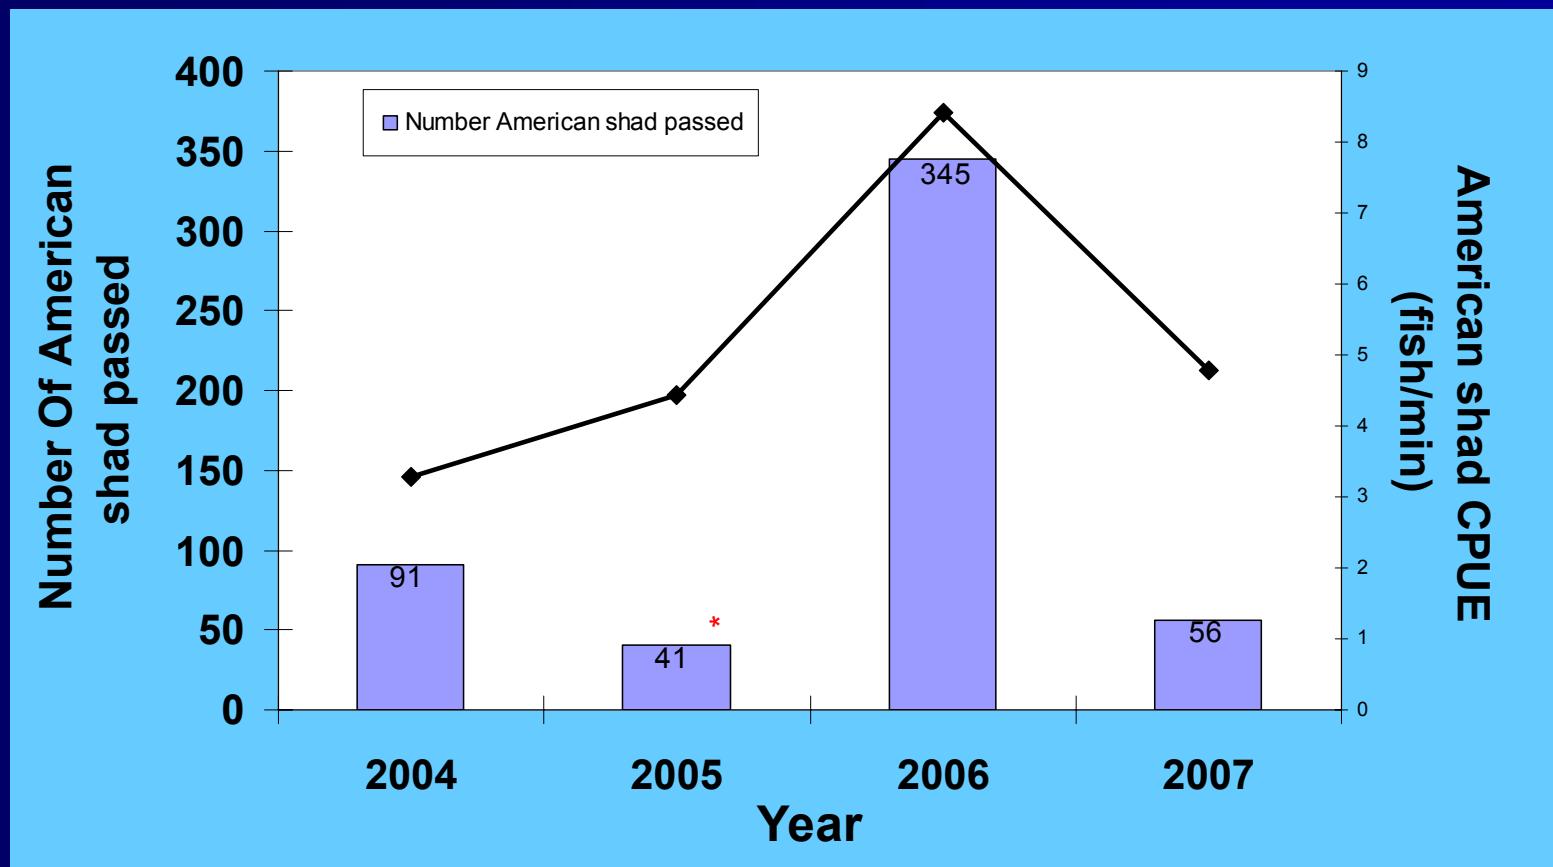

Preliminary Results:

Pre-Restoration (2002-2008)

Video Surveillance Results

* Power outage

Preliminary Results:

Pre-Restoration (2002-2008)

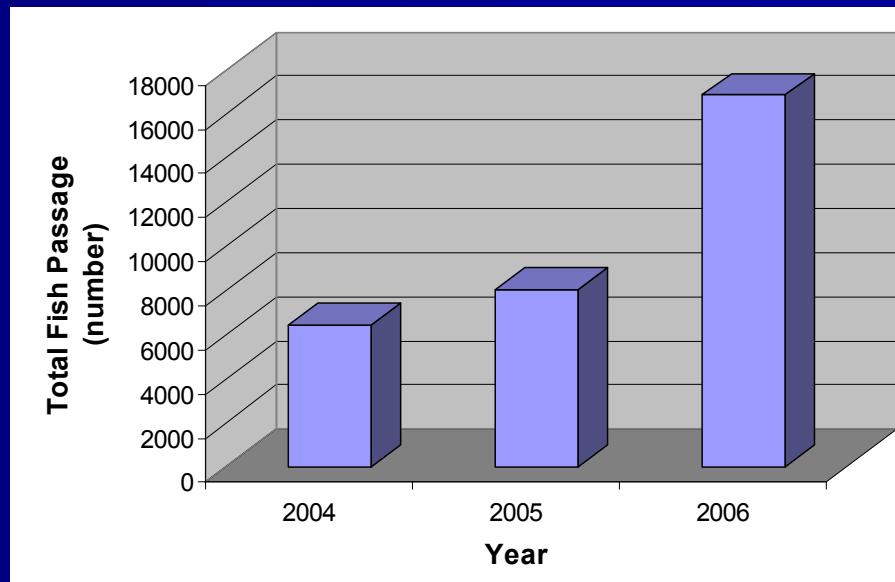

Temporal Variability In Fish Passage

Preliminary Findings:

Pre-Restoration (2002-2008)

- Fairmount Fish Ladder
 - Total fish passage numbers have steadily increased
 - Operation & Maintenance
 - Resident fish species are utilizing the passage facility with seemingly minimal difficulty
 - Initial design of fish ladder was not “optimized” for passage of American shad and other migratory species

Where Are We Now?

- Restoration of the Fairmount Fish Passage Facility is near completion

5/14/2002

12/1/2008

Where Are We Now?

- Major structural modifications

New chambers

Where Are We Now?

- Major structural modifications

Before

After

New entrance channel with automated gate system

Where Are We Now?

- Major structural modifications

Before

New "Non-Overflow" section of fish ladder
